

# 12 volts can be powered by a 24V inverter

## Overview

---

You can't use a 24V inverter with a 12V battery. This is because the voltage is too low and leads to under voltage. If an inverter senses under voltage it will signal an alarm and shut down. Always verify input specifications before connecting. This isn't just a technical incompatibility—it's a serious risk to. Choosing between a 12V and 24V inverter impacts efficiency, performance, and device compatibility.
