## Overview

---

To be more accurate, a typical open circuit voltage of a solar cell is 0.58 volts (at 77°F or 25°C). All the PV cells in all solar panels have the same 0.58V. This sounds a bit weird, but it's really not. 5%, these panels generate nearly double the power of standard residential panels while requiring only 50-60% more roof space, making them ideal for space-constrained installations. We'll explain this in detail below, but if you're still feeling unsure and need a little help on your solar journey, feel free to give us a call to discuss your needs.
