ENERGY STORAGE SYSTEM

Overview

The short answer is yes, solar panels can work without electricity, but their functionality depends on several factors, such as the type of system installed, the presence of a battery storage system, and the availability of sunlight. Photovoltaic (PV) modules convert sunlight into direct current (DC) via the photovoltaic effect. When photons hit the semiconductor junction, electrons move and create DC power—this is the raw output of your array. See the high-level background in the IEA's *Solar Energy Perspectives*. These systems are designed to provide power directly from solar panels to appliances and other loads when the sun is shining. are “grid-tied” systems without batteries (although solar. Rhythm Energy offers 100% solar plans that empower anyone—homeowner, renter, or business—to support renewable energy without rooftop panels.
