

# Are there batteries underneath the photovoltaic panels

## Overview

---

On a sunny day, the panels generate more than enough electricity for your home, so the batteries allow the system to store the excess energy for a rainy day. There are two types of solar batteries for homes: lead-acid and lithium-ion. Adding batteries to your solar energy system can increase your savings, improve energy independence, and keep your home powered during outages. This section is your guide to how batteries work, the different types of batteries, and why it's a good idea to add one or more batteries to your solar. The integration of batteries into solar installations represents a significant advancement in how a company manages its solar energy production and consumption.
