

## Overview

---

That cost reduction has made lithium-ion batteries a practical way to store large amounts of electrical energy from renewable resources and has resulted in the development of extremely large grid-scale storage systems. The first battery, Volta's cell, was developed in 1800. pioneered large-scale energy storage with the. Pumped hydro storage is the largest form of grid energy storage, accounting for up to 95 percent of all installed grid storage worldwide. The problem with reservoir hydro systems is that the storage reservoirs require significant space which can have environmental and social impacts. Where will the largest projects be built?
