

Battery thickness requirements for energy storage cabinet

Overview

This Interpretation of Regulations (IR) clarifies specific code requirements relating to battery energy storage systems (BESS) consisting of prefabricated modular structures not on or inside a building for structural safety and fire life safety reviews. UL 1487 is a product standard that addresses the safety performance of a product through both construction and testing requirements. In UL 1487, there are two primary test methods focused on thermal runaway. First, there is an internal thermal runaway test, which uses a scalable, standardized fuel. According to UL 9540 the separation between batteries should be 3ft (91. UL 9540 also provides that equipment evaluated to UL 9540A with a written report from a nationally recognized testing laboratory (NRTL), such as ETL, can be permitted to be installed with less than 3ft. Installing a battery energy storage system is a significant step toward energy independence. To ensure your system operates safely and efficiently, proper installation is paramount. Enclosure for Battery Battery box plays an integral role in both. Will the battery storage system be sited indoors or outdoors?

- Depending on the size of the battery and needs of the site, it is important to determine early on if the battery will be sited in the facility or outside of it.
