

Belarusian solar panels Cadmium Telluride solar power generation

Overview

The toxicity of cadmium is an environmental concern during production and when the panels are disposed of. Overview Cadmium telluride (CdTe) photovoltaics is a (PV) technology based on the use of in a thin layer designed to absorb and convert sunlight into electricity. Cadmium t. The dominant PV technology has always been based on wafers. and were early attempts to lower costs. Thin films are based on using thinner layers to absorb an. Research in CdTe dates back to the 1950s, because its band gap (~1.5 eV) is almost a perfect match to the distribution of photons in the solar spectrum in terms of conversion to electricity. A simple design evolved in.
