

Bolivia s wind power system

Overview

The country has four wind power plants operated by the national Electricity Company, including the Qollpana wind farm in Cochabamba and the Warnes, San Julian, and El Dorado wind farms in Santa Cruz. The Santa Cruz wind farms contribute to 108 MW capacity combined together. This was followed by the release of the “Electric Plan of the Plurinational State of Bolivia 2025,” a document explaining the government's long-term vision. Wind power generation in Bolivia recorded 56. The eastern plains and foothills of the Santa Cruz department hold significant, and often underestimated, potential for wind power development.

Bolivia s wind power system

[Successful implementation of the Power System in Bolivia](#)

A significant milestone was reached in September 2023, when the first eight Enercon wind turbines were successfully connected to the Powersystem. In January 2024, ENERTRAG ...

[Renewable Energy in Bolivia: On the Road to Sustainability](#)

One major breakout for renewable energy in Bolivia was the construction of its first wind power plant in 2014, located in Qollpana, Cochabamba.

[Bolivia: Wind electricity generation](#)

Bolivia: Wind electricity generation, billion kilowatthours: The latest value from 2023 is 0.44 billion kilowatthours, unchanged from 0.44 billion kilowatthours in 2022. In comparison, the world average is ...
