

Building greenhouses with solar

12.8V 200Ah

Overview

A solar-powered greenhouse uses sunlight as its main energy source—for heat, light, and sometimes electricity. Before you start building, it's important to understand two key approaches: passive solar design and active solar systems. Design a year-round solar greenhouse that is entirely self-sufficient, relying only on the sun to provide all of its heating needs while growing more than traditional greenhouses and using less energy, water, and resources. Just design, light, and smart thinking. If that sounds like a fantasy, it's not. In this article, we'll explain what makes a solar. Solar greenhouses harness and maximize the power of the sun to create an optimal environment for plant growth.
