

# Can photovoltaic panels be used if the glass has cracks

## Overview

---

While a photovoltaic cell will still work if it is cracked, it will be less efficient at converting sunlight into electricity. In addition, a cracked solar panel is more susceptible to damage from weather and debris, which can lead to further deterioration and decreased efficiency. This inefficiency can result in diminished performance over time and may ultimately impact the cost-effectiveness of the solar system. Most broken solar panels eventually fail. Additionally, water can get into the cracks and cause even more damage. Visions of lost energy, safety hazards, and expensive replacements might immediately come to mind. It's a common concern for solar owners, and understanding the implications of a cracked panel is crucial for both your energy production. While your damaged solar panel isn't completely useless, it's like trying to see through a shattered smartphone screen - things just don't work as well.
