

# Can solar panels be installed on Haiti s roofs

## Overview

---

With over 280 sunny days per year, Haiti's tropical climate makes it a prime candidate for photovoltaic panel installations. But how practical is it really?

Let's break it down. Imagine turning every corrugated metal or concrete roof into a mini power station – that's the opportunity. Over the past decade, rooftop solar panels in Haiti have been hailed as a sustainable solution to the country's persistent energy shortages. From homes to small businesses, solar energy once promised independence from unreliable grid power and costly generators. Débens Dieujuste, HI logistician has installed solar panels on the roof of HI's buildings in Port-au-Prince. The country has long struggled with an unreliable power grid, a problem now accentuated by fuel scarcities as armed groups obstruct access to the main oil terminal in. This energy is sourced directly from the sun, which Haiti gets a lot of. Another example is wind energy, which is harnessed using wind turbines. Hydroelectric power is also a major source of renewable energy in.
