

Canada Southern Energy Storage Base Project

Overview

The project is located on 200+ acres of land and will help meet the huge growth in electricity demand in the local area and will also benefit the overall Ontario electricity system. Commercial operation of the project is planned for the spring of 2025. The installed capacity of energy storage larger than 1 MW—and connected to the grid—in Canada may increase from 552 MW at the end of 2024 to 1,149 MW in 2030, based solely on 12 projects currently under construction 1. There are an additional 27 projects with regulatory approval proposed to come. Ontario will switch on the country's biggest energy storage facility next summer, taking a key step in transforming an aging electricity network aiming to be net-zero by 2035 — and one that could spark the grid revolution the province needs. Once complete. Developer Boralex and its partner Six Nations of the Grand River Development Corporation (SNGRDC) have closed the CA\$538 (US\$372.82) million financing of a 300MW/1,200MWh BESS park. Canada had 138MW of capacity in 2022 and this is expected to rise to 296MW by 2030.
