

# Carbon dioxide energy storage

## Overview

---

Compressed carbon dioxide energy storage can be used to store electrical energy at grid scale. The gas is well suited to this role because, unlike most gases, it liquifies under pressure at ambient temperatures, so occupies a small volume. Energy Storage News reported that it may be "a cheaper form. Energy Dome began operating its 20-megawatt, long-duration energy -storage facility in July 2025 in Ottana, Sardinia. In 2026, replicas of the system will begin popping up on multiple continents. But the gas wasn't. To increase the share of electricity generation from renewable energies for both grid-connected and off-grid communities, storage systems are needed to compensate for their intermittent nature. They are now characterized as.
