

# Current status of wind power generation technology in Denmark

## Overview

---

In 2024, wind power made up 59.3% of total electricity generation in Denmark, up from 56% in 2020, 20% in 2010 and 11% in 2000.

[2][3][4][5][6][7][8][9] This contributes to the government's target of 100% renewable power generation by 2030. This increased production results from continuous improvement in wind power technologies over the last years, which has led to a significant reduction in wind power costs. Today, more than half of Denmark's electricity production is unchanged at 54%. However, the wind share is expected to increase in 2024 by 350 MW, with the connection of the offshore wind farms Vestas to energy consumers. This output contributes to the following UN Sustainable Development Goals (SDGs) Dive into the research. Denmark was a pioneer in developing commercial wind power during the 1970s, and today a substantial share of the wind turbines around the world are produced by Danish manufacturers such as Vestas —the world's largest wind-turbine manufacturer—along with many component suppliers.

## Current status of wind power generation technology in Denmark

---

### [A Deep Exploration of Denmark's Wind Energy Technology](#)

Denmark's wind turbines have evolved significantly, becoming larger, more efficient, and more reliable over the decades. Today, modern turbines typically have a capacity of 3 to 10 ...

### Denmark , HHWE

With 7.6 GW of total wind capacity as of mid-2024, including 2.65 GW of offshore wind, Denmark remains a global leader in wind energy innovation and deployment. The country's 18 GW offshore ...

### Wind energy in Denmark

Today, more than half of Denmark's electricity production comes from wind farms.

### Wind power in Denmark

Renewable energy became the natural choice for Denmark, decreasing both dependence on other countries for energy and global warming pollution. Many countries tried to subsidise green ...

### [Current status of wind power generation technology in Denmark](#)

The article adopts the development status of wind power new energy, and the current development status of grid-connected technology is explored, hoping to help our

### [Top 5 Upcoming Offshore Wind Projects in Denmark 2026](#)

Denmark is entering a new phase of offshore wind expansion. The next decade is set to redefine Denmark's role in Europe's energy system, with wind generation already capable of exceeding ...

### [IEA Wind TCP Denmark Report 2023](#)

Denmark continues to be a global leader in variable renewable integration. 2023 was a record year for solar and wind energy generation, providing 64% of demand compared to 60% the year before<sup>1</sup>.

### Wind power in Denmark

Wind power accounted for 39% of Denmark's total installed power generation capacity and 51% of total power generation in 2023.

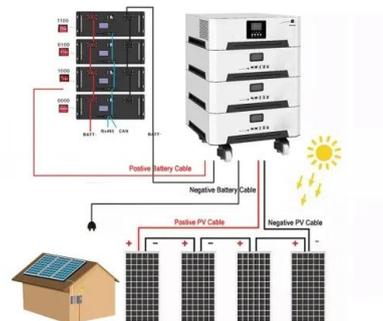

### Report 2023 Denmark

Denmark continues to be a global leader in variable renewable integration. 2023 was a record year for solar and wind energy generation, providing 64% of demand compared to 60% the year before<sup>1</sup>.

Bibliography

Danish inventor Poul la Cour experimented, taught and constructed wind power projects around the year 1900. As concerns over global warming grew in the 1980s, Denmark found itself with relatively high carbon dioxide emissions per capita, primarily due to the coal-fired electrical power plants that had become the norm after the 1973 and 1979 energy crises

[Wind energy . Cases and news from Denmark's green transition](#)

Denmark has shown that it's possible to run a power system with high shares of wind energy without compromising reliability. Today, wind turbines cover more than half of the country's

electricity ...
