

Does installing energy storage photovoltaics require approval

Overview

However, before embarking on this energy transition, a fundamental question emerges: Is a permit required?

The answer, in nearly all cases, is yes. 1 (c)14 - PDF of the 2025 Energy Code requires solar photovoltaic (solar PV) systems or modules for all newly constructed single-family residential buildings, with five exceptions (see accordion describing exceptions below). Lengthy and inefficient permitting can increase costs and waste time for everyone involved. Not only are you new to energy storage, but your local AHJ may also be new to storage, or the brand of battery that. Automated permitting is revolutionizing the industry: SolarAPP+ now provides instant permit approval in 275 jurisdictions across 13 states, reducing processing time from weeks to minutes for standard residential installations. Article 690 specifically applies to designing and installing photovoltaic.
