

Dominica New Energy Storage Project

Overview

Dominica has recently launched a new energy storage subsidy program to accelerate renewable energy adoption across residential, commercial, and industrial sectors. This initiative aligns with the island nation's goal to achieve 100% renewable electricity by 2030. The commissioning of a 6 MW / 6 MWh Battery Energy Storage System (BESS), installed at the DOMLEC facility in the Fond. Smart Energy staff stand in front of BESS system at DOMLEC's Fond Colé. Photo: DOMLEC Dominica Electricity Services Ltd. In a significant move to modernize the national power grid, the Unified Council of Electricity Companies (CUED) has unveiled a public tender for up to 600 megawatts (MW) of new renewable energy generation. Marking a national first, the bidding process mandates the inclusion of battery energy. The Dominica Schools Microgrid Project serves as a proof point for how solar and storage systems can preserve community vibrancy through bolstering energy resilience amid intensifying climate-induced hurricanes. Construction has started on the first major solar-plus-storage project in the Dominican.
