

Electricity consumption senegal

Overview

Electricity use in Senegal appears to be growing, as evidenced by the latest data from 2023, where electricity consumption per person increased to 472 kWh from 453 kWh in 2022. This is a positive sign of development and electrification in the country. Many people assume energy and electricity to mean the same, but electricity is just one. Electricity can be generated in two main ways: by harnessing the heat from burning fuels or nuclear reactions in the form of steam (thermal power) or by capturing the energy of natural forces such as the sun, wind or moving water. Net consumption excludes the energy consumed by the generating units.
