

Energy storage and new energy upstream midstream and downstream

Overview

This vast industry is divided into three key segments: upstream, midstream, and downstream. Each segment plays a critical role in delivering oil and gas from exploration to the end consumer. In this blog, we'll break down these segments, explaining their functions and. In 2023, the US energy and utilities industry set new standards for decarbonization, deploying unprecedented volumes of solar power and energy storage while enhancing grid reliability and flexibility. Three technologies reshaping the midstream landscape: Aquion Energy's aqueous hybrid ion batteries recently demonstrated 15,000-cycle durability in extreme temperature testing – a potential game-changer for desert solar farms. As we approach Q4 2025, three trends dominate industry roadmaps: But.
