

Energy storage device attenuation rate

Overview

Attenuation rate, in the context of energy storage batteries, refers to the reduction in available energy capacity over time, which can occur due to a variety of internal and external factors. Battery type influences the extent of this reduction, 3. Environmental factors, such as. This report describes development of an effort to assess Battery Energy Storage System (BESS) performance that the U. Department of Energy (DOE) Federal Energy Management Program (FEMP) and others can employ to evaluate performance of deployed BESS or solar photovoltaic (PV) +BESS systems. Real-world data and case studies are included to demonstrate practical solutions.
