

Hail and photovoltaic panels

Overview

Historically, solar photovoltaic PV modules have survived the majority of hail events they have experienced. In areas that have experienced very large hail (greater than 1 ¾" or 44 mm diameter), however, hail has caused significant damage to PV modules. Some measures can be taken to limit damage to. Hail damage is now the dominant solar insurance risk: Accounting for 54% of all solar loss claims at an average of \$58. The verdict?

Most panels emerged unscathed, proving that today's solar technology can take a serious beating. Solar panels are designed to withstand harsh weather conditions, like high winds and heavy rain – but what about frozen balls of hail falling from the sky?

Luckily, severe hail storms aren't super common around the. Solar panels are surprisingly durable. Even hail is usually not enough to damage your solar panels.

Hail and photovoltaic panels
