

# Homemade solar panel power generation controller

## Overview

---

The panel collects sunlight, the charge controller manages the flow of power to the battery, and the inverter turns that stored power into electricity you can actually use. In this article, we're going to walk you through each part, how to connect them safely, and what to look out. Sorry, an unexpected error has occurred. Why Publish?

**How to DIY a Solar Power Generator:** In this Instructable, you'll learn how to build your own DIY solar power generator using basic components like a solar panel, battery, inverter, and charge controller. Do you have what it takes to make one yourself?

My family owns a cozy off-grid cabin in the hills, but since there's no electricity, I'd only stay there. Building a weatherproof DIY solar generator involves mounting and wiring a battery, charge controller, inverter, trickle charger, and fusing inside a weatherproof case. Then all the relevant input and output sockets are wired and mounted on the outside of the case where they are easily accessible.
