Overview

Prices typically range from \$5,000 to \$25,000+ depending on capacity, technology, and installation complexity. But why such a wide range?

Let's break it down. Battery Type: Lithium-ion dominates the market (80% of installations) but costs 15-30% more than lead-acid alternatives. Consequently, benchmark systems in the utility-scale, commercial, and residential PV market sectors. 2024 ATB data for utility-scale solar photovoltaics (PV) are shown above, with a base year of 2022. The Base Year estimates rely on modeled capital expenditures (CAPEX) and operation and maintenance (O&M) cost estimates benchmarked with industry and historical data. Microinverters: Installed on individual panels, they optimize output at the panel level but increase costs. Costs. The average 10kW residential system now costs \$8,000-\$15,000 - down 18% from 2023 prices [4] [7].
