

Is it still possible to invest in energy storage projects now

Overview

For now, the market still offers reasonably attractive returns, but over time these will decline as technology becomes cheaper and investments increase. At this stage, attention should be focused on how quickly an energy storage project can be delivered and connected to the market. This momentum is more than just a number—it reflects the growing recognition that energy storage is essential to building a modern, flexible grid. Rising interest rates are reshaping capital markets, and increased exposure. Energy storage systems are increasingly in demand to increase the effectiveness of solar power arrays. The landmark tax-and-spending legislation signed into law by President Donald Trump on July 4 changed a lot of policies and tax incentives. An estimated 387 gigawatts (GW) (or 1,143 gigawatt hours (GWh)) of new energy storage capacity is expected to be added globally from 2022 to 2030, which would result in the size of global energy storage and lenders will have to become familiar.
