

Lithium battery cabinet 75kW compared to lead-acid battery

Overview

Lithium-ion (LiFePO₄) rack batteries outperform lead-acid counterparts in energy density (150-200 Wh/kg vs. 30-50 Wh/kg), cycle life (3,000-5,000 cycles vs. 500-1,000 cycles). Lightweight and compact: Lithium-ion batteries are lightweight and have a compact design, making them suitable for portable. When it comes to choosing the right battery for your application, you likely have a list of conditions you need to fulfill, such as whether to opt for lithium vs lead acid batteries. Other than the different materials that compose each type of battery, their main difference comes in terms of cost and performance. Both types have their unique strengths and weaknesses, making them suitable for different applications.

Learn the basic of lithium-ion and lead acid battery, comparing their differences, and which is right for you.

12.8V6Ah

Nominal voltage (V):12.8
 Nominal capacity (ah):6
 Rated energy (Wh):76.8
 Maximum charging voltage (V):14.6
 Maximum charging current (A):6
 Floating charge voltage (V):13.6-13.8
 Maximum continuous discharge current (A):10
 Maximum peak discharge current @10 seconds (A):20
 Maximum load power (W):100
 Discharge cut-off voltage (V):10.8
 Charging temperature (°C):0-+50
 Discharge temperature (°C): -20-+60
 Working humidity: <95% R.H (non condensing)
 Number of cycles (25 °C, 0.5c, 100%doD): >2000
 Cell combination mode: 32700-4s1p
 Terminal specification: T2 (6.3mm)
 Protection grade: IP65
 Overall dimension (mm):90*70*107mm
 Reference weight (kg):0.7
 Certification: un38.3/msds
