

# Make your own photovoltaic panel voltage control

## Overview

---

Discover how to build your own DIY solar charge controller with our step-by-step guide. Harness the power of the sun more efficiently today!. In this post I have explained how to construct a simple solar panel regulator controller circuit at home for charging small batteries such as 12V 7AH battery using small solar panel We all know pretty well about solar panels and their functions. The Arduino then converts this analog reading back into the actual voltage value and displays it on the Serial. However, to optimally harness this power, we require a tool to monitor and control the performance of solar photovoltaic (PV) systems. This Instructable intends to provide a detailed, step-by-step guide on constructing a comprehensive solar PV monitoring system. So now, let us understand how this thing works. Please note that, you can replace the IC LM338 with LM317 IC if your battery is rated lower than 7 Ah First our solar panel. Powering your electronics project using a solar panel can be fun, but how do you know if you're extracting and utilizing all the power a panel can provide?

I built a maximum power point tracking solar charge controller to make sure I could extract all the power available from my solar panel. The. Most solar panels produce much higher voltage than is necessary to charge a 12V battery.
