

Multi-energy complementary energy storage power station

Overview

In order to stabilize the output fluctuation of wind and photovoltaic power generation, and improve the efficiency of clean energy generation and reliability of power grid, this paper designs a multi-energy complementary power generation system with pumped storage power station. In order to stabilize the output fluctuation of wind and photovoltaic power generation, and improve the efficiency of clean energy generation and reliability of power grid, this paper designs a multi-energy complementary power generation system with pumped storage power station. Multi-energy systems could utilize the complementary characteristics of heterogeneous energy to improve operational flexibility and energy efficiency. However, seasonal fluctuations and uncertainty of load would have a great influence on the effectiveness of the system planning scheme. Regarding. Integrating digital technology with energy planning can enable efficient utilization of renewable energy (RE); the fluctuation of RE generation, such as wind and photovoltaic (PV), can be reduced, and the reliability of the power grid can be ensured. Energy storage multi-energy complementation represents a transformative concept in modern energy management.
