

Ocean-going cargo ship installs wind turbine

Overview

(GENEVA—Ma): Cargill today revealed exciting results of the six-month test period of the Pyxis Ocean, underscoring the potential for the wind assisted propulsion technology in moving the shipping industry toward renewable energy use. Canopée, which is equipped with four automated vertical. A cargo ship, typically a dirty oil guzzler, has taken to the open seas with a new green, clean technology onboard. The first vessel of its kind to be retrofitted with the technology called WindWings, the Pyxis Ocean has set sail from China with a lofty goal of helping the maritime industry. The Neoliner Origin is the largest cargo ship powered primarily by wind (Credit: Neoline) The Neoliner Origin, the largest cargo ship powered primarily by wind, sets sail for the first time, aiming to cut supply chain emissions by 80% The Neoliner Origin, the world's largest cargo ship to use wind. essel for installing offshore wind turbines. The \$500 million ship sets at a time or to stand at 123ft (37. After having the wings fitted a couple of percent of the engine's power. "At least that design in Rotterdam's massive world's first ever. Why not just use huge cargo vessels with sails to propel themselves with clean, free wind power?

Well, logically, it makes sense, because we all know in previous centuries there were a great number of wooden ships with multiple masts and enormous sails crossing oceans to transport vast amounts of.
