

Photovoltaic bracket installation inspection items

Overview

This procedure includes system nameplate rating (kW), solar irradiance measurement (W/m²) and module cell temperature (C). First Article Inspection (FAI): Before mass production, insist on a full FAI of a sample bracket. Measure every critical dimension. Key Dimensions: Check hole diameters, hole centering, pitch distances between holes, and overall profile lengths against the approved drawings. Providing an online list of inspection requirements will reduce informational barriers between inspectors and solar installers, helping to ensure that all items in the inspection. When it comes to maintaining a photovoltaic (PV) system, cleaning the PV brackets is an essential task that shouldn't be overlooked.
