

Photovoltaic bracket patent application

Overview

The utility model provides a flexible photovoltaic bracket, which comprises at least two bracket bodies, wherein steel beams are longitudinally arranged on the bracket bodies, a plurality of connecting plates are vertically arranged on the side surfaces of the steel beams at. The utility model provides a flexible photovoltaic bracket, which comprises at least two bracket bodies, wherein steel beams are longitudinally arranged on the bracket bodies, a plurality of connecting plates are vertically arranged on the side surfaces of the steel beams at. Search within the title, abstract, claims, or full patent document: You can restrict your search to a specific field using field names. Search by Cooperative Patent Classifications (CPCs): These are commonly used to represent ideas in place of keywords, and can also be entered in a search term box. Therefore, various types of photovoltaic array tracking bracket systems have been developed. The tracking bracket comprises a main beam and driving mechanisms; the main beam comprises a plurality of segmented beams and core shaft connectors used for axially and rotatably connecting adjacent segmented beams and. Brackets for photovoltaic ("PV") modules are described. In one embodiment, a saddle bracket has a mounting surface to support one or more PV modules over a tube, a gusset coupled to the mounting surface, and a mounting feature coupled to the gusset to couple to the tube. 5, filed with the China National Intellectual Property Administration (CNIPA) on Mar. 28, 2022, the disclosure of which is incorporated herein by reference in its entirety. The stabilizing ropes are.
