The purpose of this CMEP Practice Guide is to provide guidance to ERO Enterprise staff with respect to the consistent application of the BES Definition to BESS and hybrid resources, as well as to provide associated guidance related to the NERC Registration requirements for the owners. The purpose of this CMEP Practice Guide is to provide guidance to ERO Enterprise staff with respect to the consistent application of the BES Definition to BESS and hybrid resources, as well as to provide associated guidance related to the NERC Registration requirements for the owners. NFPA is keeping pace with the surge in energy storage and solar technology by undertaking initiatives including training, standards development, and research so that various stakeholders can safely embrace renewable energy sources and respond if potential new hazards arise. NFPA Standards that. The resource mix across North America is being transformed by the proliferation of installed renewable and inverter-based resources and interconnection queues filled with battery energy storage systems (BESS), solar photovoltaic (PV) systems, wind farms, and various combinations of these resources. This report is available at no cost from the National Renewable Energy Laboratory (NREL) at [www.nrel.gov](http://www.nrel.gov). National Renewable Energy Laboratory, Sandia National Laboratory, SunSpec Alliance, and the SunShot National Laboratory Multiyear Partnership (SuNLaMP) PV O&M Best Practices. ts and explanatory text on energy storage systems (ESS) safety. The standard applies to all energy storage technologies and includes chapters for specific Chapter 9 and specific are largely harmonized with those in the NFPA 855 2023 edition.
