

# Photovoltaic household sodium ion energy storage battery

## Overview

---

These lithium ion batteries are the most common types of solar energy products used in residential solar photovoltaic (PV) systems. Sodium ion batteries have the lowest energy density out of the group, which means they take up more space than lithium ion batteries. Electrochemical testing revealed initial capacities of 200 mAh/g for the cathode and 360 mAh/g. Sodium-ion battery technology has emerged as a game-changer for residential energy storage, offering several compelling advantages over traditional lithium-ion systems: Enhanced Safety: Unlike lithium batteries prone to thermal runaway, sodium-ion batteries maintain stable performance even in.
