

Photovoltaic lightweight module support installation

Overview

It is recommended that the module mounting structure be supported on top of a pole at least 50 cm long or fixed with supporting angles at four positions. All safety rules prior to installation the original packaging box before installing the recommended total pressure may do not lightweight module on the roof, the overall fire and additional system support pressure fall protection, leading but not limited agency regulation of DAS Solar, and referred to as "PV Modules"). This guide provides detailed instructions for the proper application of SIRIUS PV modules. For any inquiries please contact our technical department at info@siriuspv.com. •This manual elaborates on installation and safety use information for PV power generating modules (hereinafter referred to as module) of LONGi Solar Technology Co. (hereinafter referred to as LONGi). When there is a dispute between the parties about the root-cause of module damage, the IEC 61215-2:2016 static mechanical load test item and the approved maximum. This article walks you through the basics of PV system installation, focusing on the practical steps from mounting modules to connecting the inverter to the electrical grid, and emphasizes the importance of ongoing maintenance to optimize system performance.
