Overview

Click the image to download the full guide in printable form. Every step of the solar inspection process is important to ensure the success of your PV systems. This document has two sections. SECTION 1 – Field Inspection Guide: The purpose of this section is to give the field inspector a single-page reminder of the most important items in a field inspection. Defects like soiling, discolorations, cracks and snail trails can be easily detected by the visual safety or performance of the solar. This document is designed to be used as a guide to visually inspect front-contact poly-crystalline and mono-crystalline silicon solar photovoltaic (PV) modules for major defects (less common types of PV modules such as back-contact silicon cells or thin film technologies are not covered here). This presentation is based on the 2020/2023 NEC and 2021 IRC/IFC.

The need for an inspection is determined by the AHJ and/or utility where the project is installed. Their goal is to ensure the installation was completed according to the details of the permitted plan set, to ensure it complies with local building codes and interconnection requirements. Utility inspections are typically a separate function that need See more on aurorasolar
