## Overview

---

Solar panels convert sunlight into electricity, which can then be used to charge your car. But don't imagine you can connect the panels directly to the car's battery—it doesn't work like that. Clean, renewable, and cost-saving over time, solar power can fuel your EV right from your driveway. There are several electric cars with solar panels available today — some recharge the smaller 12-volt battery that runs your air conditioning, while others can top you up with a few miles of electric range — but at this time, no commercially available solar panels are capable of fully powering an. Transitioning to an electric vehicle (EV) is a decisive step toward cleaner transportation, but pairing your EV with solar panels takes sustainability and savings to the next level.
