

# Procurement of 40kWh Smart Photovoltaic Energy Storage Container in Canada

## Overview

---

The Ontario Independent Electricity System Operator (IESO) has made Canada's biggest energy storage procurement to date, selecting nearly 1.8 GW of projects through a Request for Proposals (RFP). The installed capacity of energy storage larger than 1 MW—and connected to the grid—in Canada may increase from 552 MW at the end of 2024 to 1,149 MW in 2030, based solely on 12 projects currently under construction. There has never been so much investment in new, affordable, clean sources of electricity. To support this shift, CanREA has developed a Clean. Successful electricity generation and storage procurement will meet province's energy needs through 2030.

TORONTO - The Ontario government has concluded the largest battery storage procurement in Canada's history and secured the necessary electricity generation to support the province's growing. Energy Storage Canada is the only national voice for energy storage in Canada today. We focus exclusively on energy storage and speak for the entire industry because we represent the full value chain range of energy storage opportunities in our own markets and internationally.
