Overview

Solar roads, also known as photovoltaic pavements, are roads that incorporate solar panels into their surface. The basic idea is to replace traditional asphalt or concrete roads with specially designed solar panels that can withstand the weight of vehicles while generating electricity from. An Idaho-based company conveniently named Solar Roadways has been working on the development of (you guessed it) solar panels -powered roadways. As the world seeks sustainable solutions, integrating solar technology into transportation infrastructure offers a promising path toward energy-efficient transportation. These are becoming so well known that we.
