Overview

A modeling framework developed at MIT can help speed the development of flow batteries for large-scale, long-duration electricity storage on the future grid. Associate Professor Fikile Brushett (left) and Kara Rodby PhD '22 have demonstrated a modeling framework that can help speed the development. Next-level energy storage systems are beginning to supplement the familiar lithium-ion battery arrays, providing more space to store wind and solar energy for longer periods of time, and consequently making less room for fossil energy in the nation's power generation profile.
