

# Single Uninterruptible Power Supply

## Overview

---

Single-phase uninterruptible power supply systems are ideal for powering smaller environments. These UPS systems use a single input and output source, which processes power from a single alternating current (AC) and delivers it to the electrical equipment. From a small UPS to save and shut down your PC, to large commercial systems that power large data centers or critical systems in hospitals, we have the solutions you and your customers. Uninterruptible Power Supply (UPS) systems provide power to computer networks in the event of a power shortage or electrical outage so computers and other sensitive electronic equipment can be turned off properly.

## Single Uninterruptible Power Supply
