

Smart Wind Microgrid Technology Application

Overview

In this paper, an enhanced inverter control (IC) and artificial neural network (ANN), combined as the ICANN technique, is used for optimizing and improving power quality in a microgrid system based on MPPT is presented. In this paper, a power management strategy (PMS) based on Inverter Control and Artificial Neural Network (ICANN) technique is proposed for the control of DC-AC microgrids with PV-Wind hybrid systems. ensuring access. Smart grid wind energy refers to the integration of wind power generation systems with advanced smart grid technologies. A blend of renewable energy sources,energy storage,and smart control systems optimizes resource utilization and responds to demand and supply changes in real-time 1.
