

Snow guard under photovoltaic panels

Overview

Snow guards are barriers installed between or on the edges of solar panels to hold or break up snow before it slides off the roof. Let's dive into what snow guards are and why you may or may not want to ask your solar installer about them. Solar energy can be collected in both sunny and not so sunny conditions —but what happens when it snows?

Believe it or not, your solar panels will still collect energy on a snowy day, but if heavy. Snow guards for solar panels are protective devices that prevent dangerous snow avalanches from solar installations while maintaining energy production during winter months. These retention systems cost \$1. While snow can be a valuable source of water in some parts of the world, it can also create problems when it accumulates on roofs or.
