Overview

Regular Cleaning: Most panels should be cleaned every 6-12 months, depending on your environment. **After Dusty Seasons/Rains:** Clean after pollen season, sandstorms, wildfires, or heavy bird activity. **Turn Off the System**
Gently Rinse: Use a hose with clean, lukewarm water to. These inspections involve checking the solar panels, inverters, mounting materials, and other components for signs of wear, cracks, or corrosion. For your personal safety and the best overall care, a professional solar inspection is recommended once every five to ten years while the system is. Philadelphia Solar modules are designed to withstand high snow loads (5400 pa). However, if removing snow is desired to enhance production, use a brush to gently remove snow. Do not try to remove frozen snow or ice from modules since that may cause micro-cracks in cells. This directly impacts your savings and how long your system will last. This comprehensive guide reveals the exact professional methods used by certified technicians to safely and effectively clean your solar installation without causing damage. When it comes to energy efficiency and sustainability, solar panel maintenance is an often-overlooked aspect, yet.
