

Solar molten salt power generation conditions

Overview

Molten salt is a heat transfer fluid (HTF) and thermal energy storage (TES) used in solar power plants to increase efficiency and reduce costs. It can reach temperatures as high as 565 degrees Celsius and is used to boil water when electricity is needed. This article gives an overview of molten salt storage in CSP and new potential fields for decarbonization such as industrial processes, conventional power. This study compares a novel molten salt tank based on a refractory concrete formulation with a conventional design made from 347H stainless steel over the period 2015–2025. In SolarReserve's second power plant built.
