

# Solar panels connected in parallel with two integrated solar panels

## Overview

---

How to connect solar panels together in parallel: Join the positive (+) cables of all the panels into a single one, then do the same with all the negative (-) cables. For this, you will need branch connectors or a combiner box. Series connections are ideal for larger home solar systems (4kW+) and long distances to the inverter, but they're vulnerable to shading issues since one. When building a solar power system, connecting solar panels in parallel is a practical way to increase current while keeping voltage constant. This setup is common in 12V or 24V systems where you want to safely charge batteries or run low-voltage inverters. The wiring configuration you choose directly affects your system's voltage, current, and overall performance, which determines how much solar energy you harvest.
