

Solar photovoltaic panel bird repellent device

Overview

Utilize ultrasonic devices or visual deterrents such as reflective tape, predator decoys, or holographic strips to scare birds away and discourage them from approaching your solar array. To avoid this issue and prevent birds from building nests, you can place a barrier around the space between roof and rooftop solar panels create an ideal environment for pigeons and other pest birds to nest and roost. Here are the best choices, explained in simple steps: Strong metal mesh stops birds from nesting under panels. Birds perceive the green laser light as a solid object and flee immediately when the beam moves towards them. Habituation does not occur: the movement on the laser.
