

# Solar photovoltaic panels naturally crack

## Overview

---

The short answer is: yes, a cracked solar panel will still work, at least partially and temporarily. However, this comes with significant caveats for both short-term operation and long-term viability. Short-Term Effects: Reduced Output: The most immediate effect is a drop in power. In-situ electroluminescence (EL) imaging determined that cell cracks were the primary cause of PV module damage in these particular cases. As a result, the hail damage insurance market has tightened, with many project owners struggling to obtain suitable coverage. Today, we're diving deep into the hidden stresses that make solar modules literally crack under pressure. [HOME / Why Do Solar Panels Crack Themselves?](#)

The Surprising Truth Behind PV Panel Failures Why Do. Discovering a crack in your solar panel can be disheartening. Also, some climate proceedings such as snow loads, strong winds and hailstorms when the first crack (which had reduced dimensions) was formed. Will a panel still work even if it's been cracked?

Most solar cells will continue to produce a current even after they've been.
