

# Solar power generation for heating water for bathing

## Overview

---

A solar hot water heater (also called a solar thermal system) uses sunlight to heat water for domestic use, swimming pools, or even radiant floor heating. Edited by Barry Butler, Liz Merry, and Diana Young A complete DSWH system can be installed for \$4,000 to \$7,000, depending on its size and complexity and the climate. But traditional water heating methods, such as electric geysers or gas heaters, consume a lot of energy and increase utility bills. A sustainable and cost-effective alternative is using solar power to heat water. By. Although we think of solar energy as primarily a way of generating electricity, solar water heating is an alternative use of the sun's energy, using the sun's power to warm a liquid directly, rather than using electricity to power some form of water heater.

One of the most common uses for solar water-heating is to heat pool water. Pool solar collectors are lighter in weight -- usually made of UV-resistant polymers -- and less expensive than DSWH systems. The size should be 50 to 100 percent of the surface area of the pool. The more solar collector area, the warmer the pool will be in cool weather. The p See more on ases varistorsolar
