

Solar power generation in the first nine months

Overview

76TWh of electricity from solar PV in the first nine months of the year, more than the total solar generation reported in 2024. This is according to the Q3 Global Power Report, published today by think tank Ember Climate. The world generated 2,109. Image: American Public Power Association, Unsplash.

Solar power generation in the first nine months

[Global solar power generation is projected to grow by 31% in the first](#)

Global solar power generation is projected to grow by 31% in the first nine months of 2025. In the first nine months of this year, global solar photovoltaic (PV) power generation reached ...

[Global solar generation up 31% in first nine months of 2025](#)

The collective growth of wind and solar PV generation exceeded the rise in global electricity demand in January-September, and the report's authors suggested that this demonstrates ...

[Global solar generation up 31% in first nine months of 2025](#)

The world generated 2,109.76TWh of electricity from solar PV in the first nine months of the year, more than the total solar generation reported in 2024. This is according to the Q3

[ERCOT increasingly meets rising demand with solar, wind, and batteries](#)

Utility-scale solar generated 45 TWh of electricity in the first nine months of 2025, 50% more than the same period in 2024 and nearly four times more than the same period in 2021, when ...

[India's solar additions rise as nine-month installations reach 26.6 GW](#)

India added 26.6 GW of solar capacity in the first nine months of 2025, up 53.7% from a year earlier, with large-scale projects providing most of the growth, according to Mercom India.

[EIA: 99%+ of new US capacity in 2026 will be solar, wind + storage](#)

Wind and solar combined provided 16.9% more electricity than did coal during the first 11 months of this year, and 10.1% more than US nuclear power plants. Renewables make up 26% of ...

[EIA: Solar + storage soar as fossil fuels stall through](#)

During the first nine months of 2025, electrical generation from wind plus utility-scale and small-scale solar provided 18.8% of the US total, up from 17.1% during the first three

[Solar providing more than 75% of nation's new power generation ...](#)

In the first nine months of 2025, more than three-quarters of the electrical generating capacity added in the United States was solar power, according to new data published by the ...

[In the First 3/4 of 2023, Solar Was the Fastest Growing Source of](#)

The latest issue of EIA's "Electric Power Monthly" report (with data through Septem) reveals that in the first nine months of this year, electrical generation by the mix of renewables (i.e., biomass, ...

[The Latest in Power Generation News , Power Engineering](#)

During the first nine months of 2024, utility-scale solar power generation (thermal and PV) output increased a whopping 30.1% from the same period in 2023. Estimated total solar from
