

# Solar power generation under trees

## Overview

---

The short answer is yes; trees can impact solar power production. Solar modules are distributed on the branches symmetrically and on both sides within specific inclination angles to enhance the capture of sunlight. Solar trees offer a game-changing alternative for developing renewable energy in forested areas. (Representational image) ScienceDirect A recent study indicates that. Research simulating a solar tree farm within a coastal forest in South Korea found that solar tree structures could preserve 99% of forest cover when compared to a fixed solar farm built in the same area, without sacrificing power output.
