

# Solar power generation with air conditioning function

## Overview

---

**How it Works:** During the day, your solar panels generate power. This power is immediately converted to AC by a string inverter and sent to your home's electrical panel. Your air conditioner draws from this solar power first, only pulling from the grid if it needs more. Regardless of the type of AC unit you are using, it will almost always require a solar generator with a powerful AC inverter and large battery capacity. This comprehensive guide explains how to choose and size a solar generator to run your air conditioner, so you can beat the heat off-grid, reduce utility bills, or ensure. **Why We Recommend It:** This model features ultra-fast recharge in just 43 minutes, a 2400W surge capacity capable of powering a 13,500 BTU air conditioner, and weatherproof IP67 protection. Its 10-year lifespan and 11 versatile ports make it highly reliable and practical, outperforming the BLUETTI. Air conditioning is one of the most power-hungry appliances in any home. But with ever-increasing summer temperatures and nearly year-round high temperatures in the south, no one is ready to forgo it. But thanks to today's solar technology, you don't have to.
