

# Spain s solar power generation system

## Overview

---

In 2024, solar photovoltaic became the leading technology in the peninsular electricity system in terms of installed capacity for the first time in history, reaching 31,719 MW and surpassing wind power, which accounted for 25.1% of the total installed capacity in the peninsular. Photovoltaic cells have been the building blocks of a solar power boom spurred by Prime Minister Pedro Sánchez, whose support for renewables, combined with Spain's abundant sunshine, has driven a wave of construction. Since he took power in 2018, energy developers have built solar parks, proved. 56. The Spanish electricity system added 7.3 GW of new photovoltaic and wind power capacity, the highest increase ever recorded in a single year. 6% compared to the previous year, reaching an all-time high with an installed power capacity of. 75% of Spain's electricity was generated from low-carbon sources in 2025, above the EU average of 71%. Its per. Renewable energy is currently experiencing substantial development in Spain.

## Spain s solar power generation system

---

### Solar energy in Spain

With the goal of reaching climate neutrality by 2050, the country is implementing measures to achieve a 100 percent renewable electricity mix by that year. Although wind is currently ...

### [Installed capacity . System reports](#)

The integration of this new renewable capacity, mostly wind and power solar photovoltaic, represented a significant boost to the energy transition and the fulfilment of the integration roadmap set out in ...

### [Spain Hits First Weekday of 100% Renewable Power on National Grid](#)

At 11:15 a.m. on April 16, wind and photovoltaic (PV) sources together produced 100.63% of Spain's electricity demand, a historic first for the nation's energy system. Notably, this achievement ...

### [Spain Renewables Top 55% of Power in July. Solar PV Leads](#)

Spain marked a clean energy milestone in July 2025, according to APPA Renewables' latest monthly report. Renewables generated 13,871 GWh, covering 55.1% of the national electricity mix. Solar PV ...

[Spain maintains solar leadership, but needs to accelerate pace to ...](#)

Spain boasts Europe's largest pipeline of utility-scale renewables projects in development - led by utility-scale solar, where Spain's prospective capacity (113.9 GW) is more than the next three countries ...

[The story behind Spain's solar power meltdown](#)

At some times in spring, as much as 60 per cent of Spain's electricity comes from the sun. That has enabled Spain to slash its use of gas and coal-fired power stations. Consumers have ...

[Electricity generation from renewable energies in Spain grows by ...](#)

In 2024, Spain's electricity system added 7.3 GW of new renewable capacity, primarily from solar photovoltaic and wind power--the largest annual increase ever recorded.

## Solar power in Spain

Spain is one of the first countries to deploy large-scale solar photovoltaics, and is the world leader in concentrated solar power (CSP) production. Spain is also one of the European countries with the ...

### [Spain Photovoltaic Power Generation System Market Size](#)

The Spanish photovoltaic power generation system market is projected to grow at a compound annual growth rate (CAGR) of approximately 8-10% over the next five years.
